## EDUCATION

NATIONAL UNIVERSITY  
Bachelor of Science in Information  
Technology, Specializes in Mobile  
Web Applications

## SKILLS

- React
- React Native
- NodeJS & ExpressJS
- MongoDB
- HTML & CSS
- JavaScript

# John Martin Eustaquio

## WEB DEVELOPER

I am passionate about creating modern and responsive websites that are helpful to people and society. I continuously learn new technologies and best practices to stay up to date with the ever-evolving web landscape. My goal is to use technology to make a positive impact and help businesses and communities thrive online.

## KEY PROJECTS

**ECOCOLLECT:** A GAMIFIED MOBILE BROWSER BASED APP WITH DESCRIPTIVE ANALYTICS FOR E-WASTE MANAGEMENT.

I served as the Full-Stack Developer for this project, which was built using the MERN Stack (MongoDB, Express, React, and Node.js). The system was developed for National University students and faculty to promote responsible e-waste disposal. It encourages users to donate electronic waste to designated bins around the campus by rewarding them with points, which can later be redeemed for prizes.

**QUICKRENTPH:** A PEER-TO-PEER RENTAL PLATFORM THAT CONNECTS PEOPLE TO RENT AND LEND ITEMS

I served as the Backend Developer for this system, which simulates a rental platform where users can rent out their items for a set price. The payment process follows an escrow flow, ensuring secure transactions between renters and owners. This system currently uses a mockup payment feature—we did not integrate actual GCash APIs and some features are still under development.

**ECOCOLLECT MOBILE:** A GAMIFIED MOBILE APP WITH FOR E-WASTE MANAGEMENT.

I built this app using the react native framework this is the mobile app version for Ecocollect.
